

MERYL SKINLIFE

Maintains the natural
balance of the skin

Maintains the natural balance of the skin

Odor Control

It is natural to have bacteria on our skin. When exercising, healthy skin microbes are transferred to the textile. With normal nylon fibers, these germs can proliferate and grow very quickly, leading to foul smell. Meryl® Skinlife, with inherent silver microparticles, ensures that no bacteria can grow in the textile maintaining the natural balance of the skin and reducing unpleasant odors.

Meryl Skinlife is Permanent

Due to the antimicrobial agent in the polymeric matrix, Meryl Skinlife has a permanent effect in the garment (present after more than 100 washes).

Maximum Comfort

Meryl Skinlife properties allow you to exercise as much as you want and still remain fresh. This makes Meryl Skinlife ideal for any type of clothing that comes into direct contact with the skin.

Markets & Applications

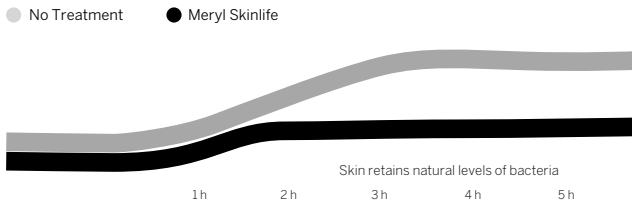

Whether it is for bodywear or sport fabrics, Meryl Skinlife provides a unique value.

Maintains the natural balance of the skin

Human skin normally has bacteria presence. A high level of bacteria, as well as a complete absence, creates various problems (allergy, odor, illness, etc.) Meryl Skinlife is not a bactericide: it does not decrease the bacteria level lower than what is normally present on the skin.

Meryl Skinlife is permanent

Thanks to its inherent silver microparticles, Meryl Skinlife is present in the garment after more than 100 washes.

Meryl Skinlife is active against the main bacteria's groups Gram + (S. Aureus) and Gram - (K. Pneumonia).

Thanks to the presence of the exclusive antimicrobial agent in the polymeric matrix there is no migration from fabric to skin, avoiding induction of allergy.

Expect the same behavior as any Meryl yarn throughout the stages of industrial processing (dyeability, running, etc).

Nylstar believes in ongoing innovation and textile research, generating upscale concepts that aim to improve consumer's quality of life. Nylstar matches proactive research and development expertise with the creative vision of retailers, designers and manufacturers to meet consumer's needs. Its visionary approach and years of research have made possible fibers like Meryl Nexten Plus, Meryl Skinlife and more recently Meryl Hyaluronan, nanotechnology man-made premium fibers.
